

State of AI in Hong Kong Marketing Industry

March 2026 | A Research Report

Executive Overview

Artificial intelligence has crossed from experiment to operational reality inside Hong Kong's marketing and advertising industry. The city's marketing ecosystem is now defined by a striking paradox: headline adoption numbers have never been higher, yet the majority of organisations still sit in the early or limited-implementation stages of their AI journey — capturing localised productivity gains without achieving the transformational, revenue-generating outcomes that AI promises.

According to the Hong Kong Productivity Council's (HKPC) *AI Readiness in Workplace Survey 2025*, **88% of employees in surveyed companies have already used AI tools in their day-to-day work**, with marketing singled out as one of the three primary application areas alongside customer service and data analysis. The Deloitte–HKU AI Adoption Index 2026 places **marketing as the second most AI-adopted business function at 54%**, just behind customer service (58%). Yet the same study finds that **only 23% of organisations report measurable financial impact** from AI, and a mere 4% have reached a truly transformational stage.[1][2][3]

A parallel finding from Twilio's research reveals what has been termed the "AI expectation gap": **87% of Hong Kong brands now use AI to personalise customer experiences, but only 42% of local consumers agree** that brands are successfully delivering on that promise. This gap — between technological deployment and felt customer experience — is the defining challenge for Hong Kong marketers in 2026. Bridging it will require moving beyond tool adoption and toward disciplined, data-grounded AI strategy.[4][5]

Key headline findings from this report:

- Total Hong Kong advertising spend reached **HK\$33.9 billion in 2025**, with social media (+15% YOY) leading all channels.[6]
 - The Hong Kong **generative AI market is projected to grow at a 35.5% CAGR**, reaching USD 21.05 billion by 2033.[7][8]
 - Internet advertising revenue in Hong Kong was valued at **US\$1.8 billion in 2024**, projected to reach US\$2.6 billion by 2029 at a 7.4% CAGR.[9][10]
 - Talent shortage is the **single biggest barrier to AI scaling**, with AI professionals commanding 20–40% wage premiums.[11]
 - The government has formally designated AI a "**pillar industry**" and allocated HK\$50 million for public AI education and upskilling.[12][13]
-

Market Context and Macroeconomic Backdrop

Hong Kong's Advertising Market in Transition

Hong Kong's advertising market navigated turbulent conditions in 2025. Total ad spend declined modestly across the first three quarters of the year — weighed down by shifting consumer behaviour, Hongkongers spending more time and money north of the border, and lingering macroeconomic caution — before a **notable 5% YOY rebound in Q4**. Full-year spend settled at HK\$33.9 billion, according to admanGo's latest data. The year's trajectory confirms a structural shift already underway: the industry is migrating from broad, analogue reach toward precision digital and social channels that are increasingly AI-enabled.[6]

Social media has emerged as the dominant medium, recording the strongest channel performance with a **15% YOY increase in adspend** in 2025, with Instagram posting the category's highest single growth rate at **35% YOY**. Mobile, television, and search engine marketing ranked second through fourth. This shift reflects a fundamental change in how Hong Kong audiences — 93.7% of whom access the internet via mobile devices — discover and engage with brands. Video advertising is the fastest-growing internet advertising segment, with

a projected CAGR of 8.5% through 2029, expected to account for 29.3% of the online advertising market by that year.[10][14][9][6]

Looking ahead to 2026, senior figures at WPP Media, dentsu, and Omnicom Media Group have expressed cautious optimism, pointing to recoveries in banking, travel, insurance, and healthcare adspend as leading indicators. A broader global trend identified by WPP Media's *TYNY* report — continued growth in digital, social video, **AI-driven advertising**, and out-of-home — is considered directly applicable to the Hong Kong market.[6]

The Macro-Digital Foundation

Hong Kong's digital infrastructure provides a strong foundation for AI-powered marketing. The city's **smartphone penetration exceeds 96.3%**, among the highest globally, creating near-universal addressability for data-driven campaigns. The government's Smart City Blueprint and its push for full-scale 5G adoption are enabling faster real-time data collection and more sophisticated programmatic capabilities.[15][14]

The Hong Kong Generative AI market was valued at **USD 1.85 billion in 2024** and is projected to reach USD 21.05 billion by 2033, reflecting a **CAGR of 35.5%**. The AI for customer service segment alone is expected to grow from USD 210 million in 2024 to USD 2.1 billion by 2033, at a 33.2% CAGR, driven by demand for personalised, multilingual, 24/7 service across Cantonese, English, and Mandarin. Hong Kong's position as an international financial hub, gateway to the Greater Bay Area (GBA), and a city with a highly educated, bilingual workforce creates a uniquely favourable environment for AI-powered marketing at scale. The city ranked **18th in the Global Innovation Index 2024**, reinforcing its standing as a regional technology leader.[16][17][7]

Adoption Levels in Hong Kong Marketing Teams

Headline Adoption Data

Hong Kong's marketing industry has moved well past the experimentation phase, but the distribution of adoption is uneven. The most comprehensive cross-industry picture comes from three landmark surveys conducted in 2025–2026.

The **HKPC AI Readiness in Workplace Survey 2025**, drawing on interviews with approximately 800 local companies, found that **88% of employees in surveyed organisations already use AI tools** in their daily work, predominantly in customer service, data analysis, and marketing. A remarkable **92% of respondents plan to gradually introduce AI into formal workflows**, with 24% targeting full implementation within one year — signalling strong intent to operationalise current ad hoc usage. However, a governance gap is already visible: while 45% of enterprises have officially recognised AI platforms, **more than half (54%) do not yet have a complete AI governance framework or policy**.^[3]

The **Deloitte–HKU AI Adoption Index 2026**, based on surveys with over 100 C-suite leaders across Hong Kong and mainland China, found AI adoption highest in customer service (58%), **marketing (54%)**, and IT/technology (53%). Despite this, the maturity picture tells a sobering story: 56% of organisations remain in "limited implementation" with only localised benefits; 23% report measurable financial impact; and a mere **4% have reached the transformational stage** where AI drives new revenue models or market differentiation. The index names siloed departments, cultural resistance, limited understanding of AI capabilities, and poor data quality as the primary barriers — not technology itself.^{[2][1]}

The **PwC Hong Kong Workforce Hopes and Fears Survey 2025** adds a workforce lens: **61% of workers in Hong Kong are leveraging AI tools at work**, ahead of the global average of 54% and closely aligned with the Asia Pacific average of 64%. Among those using AI, **77% report increased productivity and 75% report enhanced work quality**.^[18]

Functional Breakdown of AI Use in Marketing

Within marketing specifically, the fifty-five data consultancy's **2025 Survey of 350+ professionals** at the Google Cloud Summit in Hong Kong provides granular functional data:[19][20]

AI Use Case	Adoption Rate (2025)	Change from 2024
Internal automation / performance insights	~27%	▲ Growth
Content creation (copy, visuals, assets)	26%	▲ Notable growth
Chatbots and customer service automation	~24%	Stable
Customer segmentation / scoring	15%	▼ Slight decline
Marketing Mix Modelling	~8%	Low / flat
No AI use case deployed	~33%	▼ Small decrease

Content creation's rise reflects the maturation and accessibility of generative AI tools since the launch of ChatGPT. The lingering 33% who have not yet deployed any AI use case, however, confirms that adoption remains genuinely bifurcated between forward-leaning organisations and those yet to begin.[19]

The Skills Gap

Talent development represents the most acute operational challenge. The HKPC survey identifies **lack of AI expertise and training** as the single biggest hurdle to AI rollout across Hong Kong enterprises. AI professionals command **20–40% wage premiums** in the current market, and only **1 in 4 companies** has a structured AI implementation plan. A Salesforce global survey echoes this locally: **70% of marketers say their employer does not provide AI training**, while 39% avoid generative AI due to safety uncertainty

and 43% struggle to extract real business value from the tools they do use.[14][21][11][3]

In response, HKPC Academy has trained approximately **22,000 people in AI-related skills** over the past two years through more than 500 activities. The government's Continuing Education Fund (CEF) provides Hong Kong residents with up to **HK\$25,000 in reimbursable funding** (at 80% of course fees) for eligible AI and data analytics training. The government's February 2026 Budget announced the Employees Retraining Board's upgrade to "**Upskill Hong Kong**", which will expand AI application courses to the general workforce.[22][12][3]

Use Cases and Case Studies

Financial Services: Leading the Way

Hong Kong's financial services sector has produced the most sophisticated documented examples of AI in marketing, setting templates that agencies and brands across sectors are beginning to follow.

HSBC Hong Kong launched **Communication Amplifier** in late 2024 — an internally developed generative AI platform designed to produce marketing content aligned with the bank's tone of voice, compliance requirements, and business objectives. The tool reduces manual drafting time, improves consistency across channels, and allows teams to scale content production without compromising governance. The initiative earned the **Best Gen-AI Initiative award** at The Digital Banker's Global Retail Banking Innovations Awards 2025. The bank's **WealthSignal Engine** extends AI further into marketing by drawing on approximately 2,000 data points per customer to generate actionable insights for relationship managers, with 2024 enhancements adding generative AI for more personalised client engagement. HSBC is reported to be evaluating **more than 100 use cases** for generative AI across its Hong Kong operations. The bank was also recognised with the **Best Use of AI & Technology gold award** at the IAB Hong Kong Digital Awards 2025.[23][24][25]

Standard Chartered Bank (Hong Kong) and dentsu Hong Kong delivered the award-winning **"In Times of Need" campaign**, which used **1st-party data pool analytics** combined with a real-time interaction management (RTIM) decision engine to predict and deliver the "next best action" for individual customers. The campaign deployed **Adobe martech stacks** for channel prediction and leveraged AI plug-ins to connect first-party data for enhanced targeting and optimisation, earning **Gold for Best Use of Data & Insights** at the IAB HK Digital Awards 2024. In a separate campaign, Standard Chartered leveraged AI solutions with dentsu and Teads to supercharge credit card acquisition, earning **Silver for Best Use of Performance Marketing**.^{[26][27][28]}

Hang Seng Bank's partnership with VML Hong Kong produced the **Hazel AI-powered brand campaigns**, deploying an AI-powered branded conversational agent that won recognition at the IAB HK Digital Awards 2024 for Best Use of Technology.^{[29][27]}

Aviation and Travel

Cathay Pacific has emerged as one of Hong Kong's most AI-forward marketing organisations. The airline's **Cathay Pacific Media-Active Ecology** campaign, executed with Digitas Hong Kong, won **Gold for Best Use of Performance Marketing** at the IAB HK Digital Awards 2024, leveraging data-driven audience ecology and media activation. Digitas Hong Kong also executed the **DCO (Dynamic Creative Optimisation) Flight Finder** campaign for Cathay Pacific using the Adzymic Dynamic Advertising Platform, winning Silver for Best Use of Technology. A separate **data-driven audience segmentation campaign for Cathay Shop** refined performance marketing through predictive analytics and personalised retargeting.^{[30][27][31][29]}

In a more structural signal, **Cathay Pacific is reportedly reducing marketing and administrative staff** as part of a broader initiative to fund AI investments, with a target of reducing administrative costs by **20% by end-2030**. CEO Ronald Lam has instructed all divisions to identify 5% cost savings for 2026, with marketing and back-office roles targeted for AI-assisted restructuring.^[32]

Healthcare and Insurance

Bupa and DigiSalad claimed the top honour at the IAB HK Digital Awards 2024 — **Best Digital Campaign of the Year** — for their AI-powered "Together For Your Health & Connected Care Expo – Blue Health Mobile App" campaign. The campaign integrated AI-driven health solutions into consumer engagement, setting a benchmark for the category and demonstrating that AI-native campaign thinking extends well beyond financial services.[27][31]

Retail and FMCG

Asahi (in partnership with dentsu Hong Kong and The Trade Desk) deployed programmatic AI across its **Dry Crystal launch campaign**, earning Silver for Best Use of Omnichannel Strategy at the IAB HK Digital Awards 2024. The campaign used AI-powered audience identification and real-time programmatic buying across channels, demonstrating the viability of AI-driven mass-market FMCG launches in Hong Kong.[27]

Ocean Park Hong Kong partnered with **EternityX Marketing Technology** to run KOL campaigns on Xiaohongshu (XHS) and Douyin targeting GBA tourists, using data-driven analysis of KOL fanbases, engagement metrics, and content styles. The campaign earned organic top-5 rankings in Douyin search for Ocean Park keywords and placements under XHS travel vlog recommendations — illustrating how AI-powered influencer selection and performance measurement is becoming standard practice for destination marketing aimed at mainland Chinese visitors.[33]

Tools and Platforms Landscape

Global AI Tools in Local Use

The Hong Kong marketing industry draws predominantly from the same global toolset as its regional peers, with selection driven by existing enterprise relationships, agency holding-company agreements, and specific use-case requirements.

ChatGPT (OpenAI) dominates as the most widely used AI content tool, with 90% usage among marketers globally who have adopted AI. In Hong Kong's agency and brand environments, ChatGPT and its enterprise variant are used for brainstorming, copy drafting, social media caption generation, and brief preparation. **Adobe Firefly** has gained rapid traction among creative agencies and in-house design teams for image generation, text effects, and vector creation within the Creative Cloud ecosystem, with enterprise controls for copyright filters and brand asset governance.[34][35]

For media and programmatic, **The Trade Desk** and **Google DV360** are the dominant demand-side platforms deployed by Hong Kong agencies, both of which have embedded AI-driven bidding, audience prediction, and creative optimisation. **Adzymic**, a dynamic advertising platform with a local Hong Kong presence, has been used notably by Cathay Pacific for DCO campaigns. **EternityX Marketing Technology** offers a HK-headquartered platform specifically designed for cross-border marketing targeting mainland Chinese audiences via XHS, Douyin, WeChat, and other platforms, with AI at its core for KOL selection and audience analytics.[36][29][33]

Martech Stack Architecture

The most sophisticated Hong Kong marketing operations are now built around **Customer Data Platforms (CDPs)** and **real-time interaction management engines**, connecting first-party data to AI-driven decisioning. Standard Chartered's deployment of Adobe martech stacks alongside its RTIM engine exemplifies this architecture. HSBC's analytics infrastructure converts signals from **more than six million customers** into intelligence for marketing and frontline relationship management. Over 40% of Hong Kong organisations have now implemented robust data governance frameworks for collection and reconciliation — a prerequisite for meaningful AI marketing, and a notable increase from 2024.[25][26][19]

Local AI Providers

SenseTime, founded in Hong Kong in 2014 and listed on the Hong Kong Stock Exchange, is a significant local AI technology provider. Its **SenseNova** large model system underpins **Sensechat**, a Cantonese AI assistant launched in May 2024 and comprehensively upgraded in June 2025 with multimodal capabilities (real-time audio, video, and visual reasoning). Sensechat's deep understanding of Hong Kong's local culture, customs, and Cantonese linguistic nuances makes it a uniquely relevant AI tool for locally contextualised marketing content and customer service.[37][38]

fifty-five (data consultancy), **DigiSalad** (full-service digital agency), **Hungry Digital**, **NDN Group**, and **Pertama Partners** (AI training and advisory) represent the ecosystem of local specialists supporting marketing teams in AI adoption, data strategy, and creative production.[31][22][26]

Category	Key Platforms
Generative AI (content)	ChatGPT, Adobe Firefly, Claude (Anthropic), Google Gemini
Programmatic & Media	The Trade Desk, Google DV360, Adzymic
Martech & CDP	Adobe Experience Cloud, SAP Emarsys, Salesforce Marketing Cloud
Cross-border / GBA	EternityX, Tencent Marketing (WeChat), ByteDance (Douyin), XHS Ads
Data & Analytics	fifty-five, Google Analytics 4, Looker Studio
Local AI	SenseTime SenseNova / Sensechat, NDN Group
Training & Advisory	Pertama Partners, DigiSalad, HKPC Academy

Regulatory and Ethical Considerations in Hong Kong

The Regulatory Landscape: Principles Over Prescriptions

Hong Kong does not yet have a comprehensive, stand-alone AI law. Instead, the city has adopted a **sector-by-sector, principles-based approach**, with different regulatory bodies overseeing different industries. Experts have noted that Hong Kong's market may be too small to sustain an independent set of generative AI laws, but a rising tide of deepfake fraud and improper AI use in advertising has created growing urgency for more structured oversight.[39][40][41]

The most significant regulatory development to date is the **Hong Kong Generative Artificial Intelligence Technical and Application Guideline**, published on 15 April 2025 by the government's Digital Policy Office (DPO). Developed in collaboration with the Hong Kong Generative AI Research and Development Centre (HKGAI), the guideline offers practical operational advice on the scope and limitations of generative AI applications, potential risks (data leakage, model bias, error propagation), and governance principles. Crucially, the guidelines are **non-binding** — they establish norms and best practices but do not carry penalties for non-compliance.[42][40]

The **Personal Data (Privacy) Ordinance (PDPO)** remains the primary legal instrument governing AI use in marketing. Its requirements govern how personal data is collected, used, and retained in AI systems, with particular implications for customer segmentation, targeted advertising, and personalisation engines. The **PCPD's AI Model Personal Data Protection Framework** (June 2024) and its **Guidelines for Use of Generative AI by Employees** (March 2025) provide organisations with structured frameworks covering permissible use, bias prevention, data security, and governance committees. Cross-border data transfer rules under the PDPO are especially pertinent for brands running integrated campaigns across Hong Kong and mainland China.[43][44][45][15]

Deepfakes and AI-Generated Content in Advertising

The risks of AI-generated content have moved from theoretical to front-page in Hong Kong. In 2024, fraudsters used a **deepfake video call impersonating a company's CFO** to deceive an employee into transferring approximately **HK\$200 million**. In 2024 and 2025 combined, police dismantled two criminal syndicates that used deepfakes for fraud totalling nearly **HK\$400 million**. While these cases were primarily financial fraud rather than advertising abuse, they have significantly raised the regulatory and reputational sensitivity around AI-generated content in Hong Kong.[46]

For marketers, the PCPD has clarified that using personal data to create or disclose deepfake materials — including AI-generated likenesses of people in advertising — may **contravene Data Protection Principles 1 and 3 of the PDPO** if it exceeds the original purpose of data collection or is collected on an unfair basis. In September 2025, the South China Morning Post reported that Hong Kong's market is **too small to independently enforce AI content labelling laws** comparable to mainland China's recent regulation requiring explicit watermarks on all AI-generated content, though the trend creates compliance pressure for brands operating cross-border. [41][46]

The Chief Executive's 2025 Policy Address tasked the **Department of Justice** with coordinating a review of laws needed to complement wider AI application — a process expected to produce recommendations within 2026.[46]

Ethical Imperatives for Marketers

Beyond legal compliance, Hong Kong's marketing industry faces three distinct ethical considerations as AI adoption deepens:

Transparency in personalisation: 83% of Hong Kong consumers say they want control over their personalisation settings and the ability to choose how brands communicate with them, rather than having AI automatically assume their preferences. The expectation is not merely that personalisation be relevant — but that it be consented, transparent, and controllable.[4]

Algorithmic bias and multilingual equity: In a market where campaigns must function across Cantonese, English, and Mandarin, AI systems trained predominantly on English-language data risk producing systematically biased outputs. SenseTime's investment in Cantonese-native LLM capabilities for Sensechat reflects commercial recognition of this gap.[37]

Job displacement accountability: Cathay Pacific's reported restructuring of marketing roles to fund AI investment highlights a tension that will escalate across the industry. Responsible AI adoption will increasingly require organisations to articulate explicit reskilling commitments alongside automation plans.[32]

Future Scenarios and Forecasts

The Road to 2030: Three Scenarios

The trajectory of AI in Hong Kong's marketing industry over the next three to five years will be shaped by three intersecting forces: the pace of organisational maturity, the evolution of regulatory clarity, and the competitive pressure from GBA-native AI platforms.

Scenario 1 – Accelerated Convergence (Base/Optimistic Case)

Building on Q4 2025's advertising recovery and strong government tailwinds — including the HK\$50 million AI education fund and the "Upskill Hong Kong" retraining initiative — organisations close the AI maturity gap. CDPs, first-party data infrastructure, and RTIM platforms become standard practice among top-50 advertisers. The share of organisations reporting measurable financial impact from AI grows from 23% toward 40% by 2028. The generative AI market reaches its projected 35.5% CAGR growth path, with cross-border GBA campaigns managed through unified AI platforms as the dominant growth frontier. AI agents — systems capable of executing end-to-end marketing workflows autonomously — begin displacing discrete tool use, consistent with global projections showing agentic AI growing from USD 7.2 billion in 2025 toward USD 27.7 billion in coming years. [8][47][12][33][1][7]

Scenario 2 – Structural Lag (Moderate/Realistic Case)

The majority of organisations remain in the "limited implementation" stage, capturing cost efficiencies from AI in content production and campaign reporting but failing to achieve customer experience transformation. The expectation gap between AI-powered personalisation and felt consumer experience persists or widens, consistent with Salesforce's global finding that **75% of marketers have adopted AI yet 84% still run generic campaigns**. Talent shortages, data fragmentation, and the absence of binding AI governance requirements slow industry-wide progress. This scenario aligns with Deloitte-HKU's current finding that only 4% of organisations are genuinely transformational.[48][1]

Scenario 3 – Regulatory Disruption

A significant deepfake advertising incident — a fraudulent AI-generated brand campaign, fabricated celebrity endorsement, or manipulated pricing scheme — triggers emergency regulatory action. Hong Kong introduces mandatory AI content labelling for digital advertising aligned with mainland China's existing requirements. Compliance overhead increases, but trust in AI-produced content is ultimately enhanced, accelerating adoption by risk-averse sectors such as financial services and healthcare.[41]

Key Metrics to Watch

Near-term (2026):

- Total ad spend recovery: industry consensus is cautiously optimistic for selective, digital-led growth led by banking, travel, insurance, and healthcare.[6]
- Internet advertising projected to grow year-on-year in line with PwC's 7.4% CAGR trajectory toward US\$2.6 billion by 2029.[9]
- The proportion of organisations with complete AI governance frameworks (currently ~46%) is expected to rise sharply as DPO guideline adoption matures.[3]

Medium-term (2027–2029):

- Video advertising, including Connected TV, is projected to claim 29.3% of internet advertising by 2029. Generative AI's role in

- automating personalised video ad creation is expected to be a primary driver.[10]
- GBA campaigns leveraging AI-driven audience segmentation across XHS, Douyin, and WeChat will become a core competency for Hong Kong agencies with regional ambitions.[33]
 - R&D is emerging as the next AI frontier in marketing: current adoption sits at 45% but future investment priority is expected to reach 51%, as organisations begin using AI to generate intellectual property and new product-market insights from consumer data.[2]

Long-term (2030+):

- The Deloitte-HKU survey found that **nearly 75% of C-suite executives expect AI's share of business value to grow by at least 10%** in the three years between their two-year and five-year outlooks.[49][2]
- Agentic AI marketing workflows — multi-model systems that autonomously plan, create, test, optimise, and report on campaigns — are expected to reshape agency staffing models, with creative, strategic, and measurement roles evolving rather than disappearing.
- The full build-out of Hong Kong's AI supercomputing infrastructure and the government's "Committee on AI+ and Industry Development Strategy" are positioned to attract international AI talent, further strengthening the city's position as Asia's premium AI marketing hub.[50][12]

Data and Methodology

This report is based on a synthesis of primary survey data, industry award records, government policy documentation, corporate announcements, and trade press reporting gathered between Q2 2024 and Q1 2026. Key primary data sources include:

Industry Surveys

- **HKPC "AI Readiness in Workplace Survey 2025"** (October 2025): ~800 local companies surveyed by HKPC Academy in September 2025.[3]

- **fifty-five Data Governance and AI Adoption Survey 2025:** 350+ professionals at the Google Cloud Summit Hong Kong, published July 2025.[20][19]
- **Deloitte–HKU AI Adoption Index 2026:** 100+ C-suite leaders across Hong Kong and mainland China, published February 2026.[1][2]
- **PwC Hong Kong Workforce Hopes and Fears Survey 2025:** Published 2025.[18]
- **Twilio 2025 State of Customer Engagement Report:** 7,640 consumers and 637 business leaders across 18 countries, with Hong Kong-specific data cuts.[51][4]

Market Data

- **admanGo HK Ad Spend Report 2025:** Industry-standard tracking of total advertising expenditure by channel.[6]
- **PwC Global Entertainment & Media Outlook 2025–2029 (Hong Kong chapter):** Internet advertising forecasts.[9][10]
- **Statista Generative AI Market Forecast (Hong Kong):** Market sizing and CAGR projections.[52]

Government and Regulatory Sources

- HKSAR Digital Policy Office: *Hong Kong Generative AI Technical and Application Guideline*, April 2025.[42]
- Office of the Privacy Commissioner for Personal Data (PCPD): *AI Model Personal Data Protection Framework* (June 2024) and *Guidelines for Use of Generative AI by Employees* (March 2025). [44][45]
- Government Budget Speeches and Policy Address Announcements, 2024–2026.[13][12]

Industry Recognition and Case Studies

- IAB Hong Kong Digital Awards 2024 (awarded March 2025): Full winners list and campaign documentation.[31][27]
- DigiZ Awards Hong Kong 2025.[26]
- Marketing Excellence Awards Hong Kong 2024.[53]
- Corporate announcements from Cathay Pacific, HSBC Hong Kong, Standard Chartered, and SenseTime.[25][32][37]

- Trade press: *Marketing Interactive*, Campaign Brief Asia, Marketech APAC, and The Digital Banker.[4][25][6]

Scope and Limitations

This report focuses on Hong Kong's marketing and advertising industry with particular attention to digital, data-driven, and AI-enabled practices. Financial services, aviation, retail, healthcare, and FMCG sectors are covered through documented case studies. SME-level adoption is discussed but data at that segment level is limited due to the concentration of public data from large enterprises and listed companies. Projections are sourced from third-party research providers and carry inherent uncertainty; they are presented as directional guidance rather than definitive forecasts. All monetary figures are presented in the currency of the original source.

Report compiled March 2026. Data accurate as of publication date.
